

Which analysis is better depends entirely on beta

$$F_{\beta} = \frac{(1 + \beta^2)PR}{\beta^2P + R} \quad \text{-- medians over 4 (tag x cell) panels per method, high-dispersal cells only}$$

method

- EMMAX consensus
- LFMM Simes
- EMMAX single-SNP (excl. singletons)
- LFMM single-SNP (excl. singletons)
- EMMAX Simes
- EMMAX single-SNP (incl. singletons)
- LFMM single-SNP (incl. singletons)
