

Neutral chromosome: false discoveries with zero QTN present

method

- emmax_consensus
- lfrmm_simes
- emmax_snp_clustered
- lfrmm_snp_clustered
- emmax_simes
- emmax_snp
- lfrmm_snp

Same, by cluster size (pooled across cells)

all Chr2 significant regions are FP by construction (no QTN on Chr2) -- no permutation, an assumption-free empirical false-discovery count
